

# MetaSquare

We are looking for Front-End Developers who are passionate about presentation, interaction, accessibility, and technology. You will be comfortable working across a range of web technologies and should have a solid knowledge of HTML/CSS/JS (jQuery/Bootstrap) with focus on cross-browser compatibility and semantic markup. You should also have strong object-oriented development skills and experience developing rich, highly dynamic, client-side applications. MVC architecture familiarity is assumed. A basic understanding of back-end programming architecture and technologies used to develop web projects and mobile applications would be a great advantage.

Your responsibilities will include leveraging best practices and accurately estimating and tracking your time across multiple simultaneous projects. Environment is fast paced, production driven, and deadline oriented.

We have a range of short and long term opportunities with our teams.

## **Skills:**

- Extensive knowledge in HTML5 and CSS3
- Minimum 3+ years of experience in JQuery, Bootstrap, Backbone
- Strong knowledge of consuming services (XML, JSON, SOAP) using Ajax
- Minimum 1 year experience with Node.js, Maven and Grunt
- High level of experience with modern repository software such as Mercurial HG, SourceTree or Git.
- Demonstrated strong front-end development skills especially concerning accessibility, extensibility, client-side computing, object-oriented design patterns, and object-oriented CSS.
- Excellent problem solving and communication skills.
- Curiosity for learning new technologies and methods, as well as a desire to build great products.
- Experience with customising CMS templates and components
- Some experience in creating exciting experiences on the iPad, iPhone and other mobile devices that conform to W3C standards.
- Over 1 year experience working directly with AEM/CQ5
- Knowledge of design tools including, Photoshop, Illustrator.
- Basic knowledge of servers such as Apache

- Basic knowledge of Omniture and other tracking software a plus.
- Understanding of server side languages such as Java/J2EE
- Agency experience is a plus.
- Understanding of security and privacy requirements for data protection
- Understands the underlying systems on which web applications are developed.
