

# MetaSquare

We are seeking full-time, freelance and contract-to-hire ASP.NET Application Developers to join our experienced team to design, develop, test and support a variety of complex, business-critical systems and web-based interfaces for existing clients.

Positions are available from entry to mid-level and for senior programmers at our New York office or for remote employment.

## **Your key responsibilities in this position:**

- Web application development and maintenance, primarily ASP.NET (VB.NET and C#)
- Integration of UI design into applications
- Assist in the creation of clear, concise and accurate documentation
- Technical and non-technical communication with clients, designers and third parties.

## **Your critical qualifications/skills for this position include:**

- Proficiency with .NET framework, ASP.NET application development (VB.NET and/or C#) and VisualStudio
- Ability to create and modify stored procedures, as well as queries to extract and update data in SQL Server
- Comfort level applying and tweaking CSS/HTML5 created by designers
- Familiarity with jQuery/Javascript
- Experience with object oriented design and implementation
- Ability to express complex technical concepts in easily understood business terms
- Ability to perform work within specific timeframes
- Ability to work effectively with other teams and vendors
- Proactive style showing the motivation to respond quickly to business needs
- Strong desire to learn and apply the latest technologies
- Bachelor of Science degree in related field or equivalent experience.

## **What's in it for you:**

- Jump start your career with an emerging business leader
- Opportunities to work independently or in a group setting
- Innovate and Enjoy the perks of paid vacations\*

Compensation is commensurate with experience and skills. Must be authorized to work in the United States for full-time employment.
